The EHRConnection

Welcome to EHR Concepts' Tips and Tricks e-Newsletter. The purpose of this Newsletter is to offer professional advice to you and your organization in order to help enhance your EHR.

End User Tips

Did you know that while documenting Immunization history in the ACI, you can type words into the date field and have it populate on the Immunization record (flowsheet)? For instance, let's say you had a patient that had the Chicken Pox disease and you would like this to be documented. You would simply search for the immunization (varicella) and then in the date field of the ACI, type "Immunity" or "had chicken pox".

The immunization is listed on the flowsheet and these details will also populate when the immunization record is printed.

....

Note Build

As tempting as it might be, we recommend not editing the Allscripts delivered Noteforms. If the Allscripts delivered noteforms have been edited, newly released noteforms added to the system may overwrite previous edits. To personalize for your organization, copy the Allscripts delivered noteform and save it with your own naming convention, such as the initials to your hospital or organization. This also makes it easier to search for forms that you have created in the past.
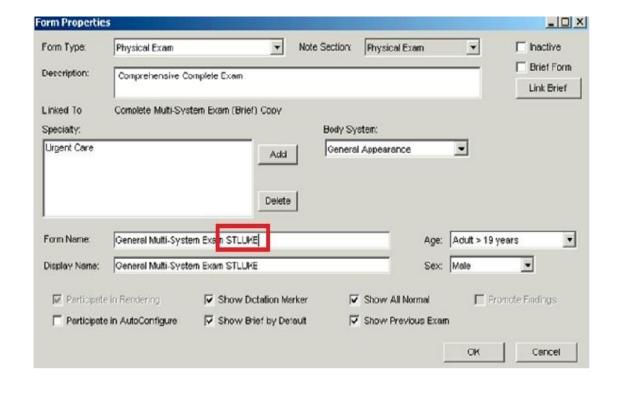

EHR Concepts

A unique and innovative full service company comprised of Allscripts EHR professionals. We pride ourselves on being masters of the Allscripts Enterprise EHR. We have a proven method of taking clinical professionals from zero use to 100% utilization of Allscripts EHR.

President's Corner

We are extremely excited to be a Proud Sponsor of ACE 2013. Please

Provider Tip

Verification issues: To prevent the Provider from receiving a task on a lab result that he/she has already seen, remember to *UN*-check the **Verification Required** box on the **Orders Detail Results** page.

If verification is required at the organization you are working, the Provider can verify from within the Note Authoring Workspace while working with a patient's note. This saves time by not having to verify the results later from the Worklist or Task List.

The option to Verify or QVerify is not shown when you open up the Results/Data section. You can find this option by *double*-clicking on the actual results inside the results/data area of the NAW. The order viewer will display and allow you to verify without leaving the NAW.

Order Details

Status: **Resulted: Requires Verification**   Requested to be done: **16Jun2013**   For: **Acute Pharyngitis (462)**
Requested Performing Location: **Bridgeport Urgent Care Lab**   Priority: **Routine**   Order #: **TW6436730**   Requisition #: **127626**
